North American Green “American-Made” Coir Logs

Coir logs can function in many ways. Along the toe of shorelines and streambanks, coir logs can act as a wave break or flow barrier. On slopes and along perimeters, coir logs can trap sediment while filtering water. North American Green coir log technology can help the success of your project regardless of project difficulty. With varying sizes, weights and netting types, there is a coir log for every application from sediment control and dewatering to erosion protection and revegetation in wetlands, waterways and environmentally sensitive areas.

North American Green coir logs are available in 5-, 7- and 9-lbs densities, diameters up to 20 inches, and natural or synthetic netting options.

Where to use coir logs?

- Sediment control and dewatering applications
- Slope, lake and reservoir shoreline protection and revegetation
- Beaches, dunes, tidal, estuary and surge transition zones
- Wetland and riparian areas
- Waterways, streambanks, riverbanks and woodlands
- Toe protection with erosion control blankets, mats or mulches
- Ideal for use with Vmax³®, ShoreMax™, and BioNet® products in shoreline and stream bank stabilization projects

Our “American-Made” line of coir logs offers many unique features:

- Consistent high quality
- Machine compressed coir fiber produces consistent fill densities
- Palletized 10 ft logs for easy shipping, handling and storage
- Available in natural or synthetic netting and 8-, 12-, 16- and 20-in. diameters
- High quality coir- and poly-nettings allow logs to be moved and reused
- Poly-netted logs available for greater durability and extended longevity
- Durable enough to survive the impact of heavy trucks and equipment
- All poly-netted logs use knotless nets for extra strength and durability
- Permeable coir logs effectively filter sediment-laden water
- Low maintenance can reduce cost compared to silt fence and filter socks
- NAG design assistance, specification/technical support and guarantee

North American Green Coir Logs are the only compressed coconut coir logs that are made in America. You will find that our coir logs have the highest quality and consistency and will offer the highest performance on your projects. Gain confidence knowing that when you select an American-Made Coir Log from North American Green, you are getting what you order, when you order it.

EROSION CONTROL Products • Guaranteed SOLUTIONS

	Application	Product Name	Density (lbs/ft ³)	Flow Velocity (ft/sec)	Diameter (in.)	Standard Length* (ft)	
Coir Net	<i>Application: 100% biodegradable requirement; Longevity: Up to 3 years</i>						
	Bioengineering, Sediment Control, Dewatering, Slope Contouring, Live Staking	08CN5	5	< or = 3	8	10	
		12CN5	5	< or = 3	12	10	
		16CN5	5	< or = 3	16	10	
		20CN5	5	< or = 3	20	10	
	Bioengineering, Live Staking, Live Fascines	08CN7	7	< or = 5	8	10	
		12CN7	7	< or = 5	12	10	
		16CN7	7	< or = 5	16	10	
		20CN7	7	< or = 5	20	10	
	Bioengineering, Vegetated Coir Logs, Fill Slopes, Wave Energy	08CN9	9	up to 12	8	10	
		12CN9	9	up to 12	12	10	
		16CN9	9	up to 12	16	10	
		20CN9	9	up to 12	20	10	
	Yellow Polypropelene Net	<i>Application: Sediment control and dewatering; Longevity: 1–2 years</i>					
		Bioengineering, Sediment Control, Dewatering, Slope Contouring, Live Staking	08YPN5	5	< or = 3	8	10
			12YPN5	5	< or = 3	12	10
Brown Polypropelene Net	<i>Application: For use with Vmax³® and ShoreMax™ Systems or high-energy sites; Longevity: Greater than 7 years</i>						
	Bioengineering, Sediment Control, Dewatering, Slope Contouring, Live Staking	08BPN5	5	< or = 3	8	10	
		12BPN5	5	< or = 3	12	10	
		16BPN5	5	< or = 3	16	10	
		20BPN5	5	< or = 3	20	10	
	Bioengineering, Live Staking, Live Fascines	08BPN7	7	< or = 5	8	10	
		12BPN7	7	< or = 5	12	10	
		16BPN7	7	< or = 5	16	10	
		20BPN7	7	< or = 5	20	10	
	Bioengineering, Vegetated Coir Logs, Fill Slopes, Wave Energy	08BPN9	9	up to 12	8	10	
		12BPN9	9	up to 12	12	10	
		16BPN9	9	up to 12	16	10	
20BPN9		9	up to 12	20	10		

* Also available in custom roll lengths
